#### The Caribbean Outlook

LC/SES.37/14/Rev.1

June 2018

118 p.

Over the past five decades, Caribbean small island developing States have made significant progress in both deepening and entrenching democratic traditions and norms, and in advancing human development. Despite such progress, the subregion's sustainable development trajectory has become increasingly uncertain. In recent years there has been a growing awareness that the subregion has persistently lagged behind comparable economies in the developing world on the path to sustainable

development. Long-standing problems are now being aggravated by climate change, with the increasing frequency and intensity of extreme events hampering the sustainable economic growth of these island economies and undermining the security of their populations. The resulting damage and loss has also led to escalating costs and a greater emphasis on disaster risk management.

### Project Document

#### Addressing capacity gaps in the production of the SDG indicators in the Caribbean

LC/CAR/2017/20  
20 p., december 2017

The Global Sustainable Development Goals (SDGs) Indicator Framework is endorsed by the United Nations Statistical Commission as the monitoring mechanism for the 169 targets and more than 230 indicators of the SDGs. Reporting of these indicators will pose a formidable challenge to the Caribbean given the statistical capacity of countries of the subregion. The results of an ECLAC survey show that only three of the

eleven countries that participated reported having the capacity to produce at least 50 per cent of the indicators. The capacities of National Statistical Offices will need to be significantly enhanced to meet the data requirement of the SDGs. Addressing the legislation and policies issues relating to data collection, processing and dissemination will be a desirable first step in this direction.
